Profile

Full-stack engineer with an array of tech skills, abilities and an eye for design. I am versatile, reliable and forward thinking, with the proven ability to up-skill and adapt rapidly.

In addition to my tech career, I have worked within many sectors and gained valuable experience in logistics, where I honed my communication skills and excelled in resource management.

Stack

- Python
- Django
- HTML & CSS
- JavaScript (ES7)

Cloud

- Google Cloud Platform
- Amazon Web Services

Data

- Apache Airflow
- Google Big Query
- SOQL - Salesforce
- PostgreSQL

Professional Experience

02.2024 - Present

Data Engineer II

Delivery Hero SE | Berlin, Germany

- Engaged in a team effort to design a customized ETL solution to replace Fivetran and reduce monthly expenses by up to €10,000.
- Took ownership on automating the transformation of sensitive banking information, saving 200 man hours each month on manual data entry and preventing 1200+ record errors in Salesforce financial records.

07.2022 - 02.2024

Data Engineer I

Delivery Hero SE | Berlin, Germany

- Independently designed and deployed a dynamic data visualization dashboard using Django and Dash Plotly. Included anomaly detection capabilities with Scikit-learn and Slack API alerts for pipeline anomalies.
- Managed the seamless integration of two additional Salesforce instances (GRC & CCS) into our core Data Warehouse (DataHub), streamlining data accessibility for stakeholders while ensuring compliance with access permissions and PII.
- Strengthened data security measures by implementing AWS Secrets Manager to securely store team API keys and credentials.

04.2022 - 07.2022

Data Engineer (Internship)

Delivery Hero SE | Berlin, Germany

- Created a Python text formatting library that increased team productivity while writing YAML and SQL configuration files.

Education

- 09.2021 - 03.2022 **Software Engineer - Tech Academy**
Digital Careers Institute | Berlin, Germany
- 09.2015 - 07.2017 **Electronic Music Production**
Catalyst Berlin | Berlin, Germany
- 09.2013 - 11.2015 **Business & Management**
Technical University Dublin | Dublin, Ireland

Languages

- English | Fluent
- German | B2
- Spanish | A1

Additional Projects

Foodstah

A social recipe sharing media app for food and drinks

A Python & Django based web app that allowed users to upload images and recipes of food and drinks they have eaten or made. The users could comment and follow each-other with a food-feed similar to Instagram or Facebook. Recipes were also available to download as a .pdf with the click of a button

Apartment-Matcher.com

An automated apartment application service

A team of three, including myself is currently developing a web application powered by Django tailored to automate the home-finding process. This application enables users to register, input their home search criteria, and sign-up for a subscription. Leveraging this data, our software scans various apartment listing websites, applying powerful scraping tools. Upon identifying listings that align with each user's preferences, the application smartly dispatches applications to the appropriate endpoints, manufacturing a seamless home-finding experience.
